

Data Pipelines, Reinvented.

Complete replication. Zero coding or maintenance. Standardized schemas.

Effortless setup

Our platform requires zero configuration and is designed to be plugged and played. We can begin syncing your data inside of five minutes.

Fully managed connectors

Our pre-engineered connectors replicate all your applications, databases, events and files into your warehouse — and we own all maintenance.

Normalized schemas from cloud APIs

Ready-to-query schemas enable instant analytics and ensure you get all the data you need, without any duplicates.

Automated schema migrations

Our connectors respond to source changes automatically, and you can always add sources — no coding required.

Incremental batch updates

Instead of reloading full data dumps from APIs and databases, we incrementally update all your data sources.

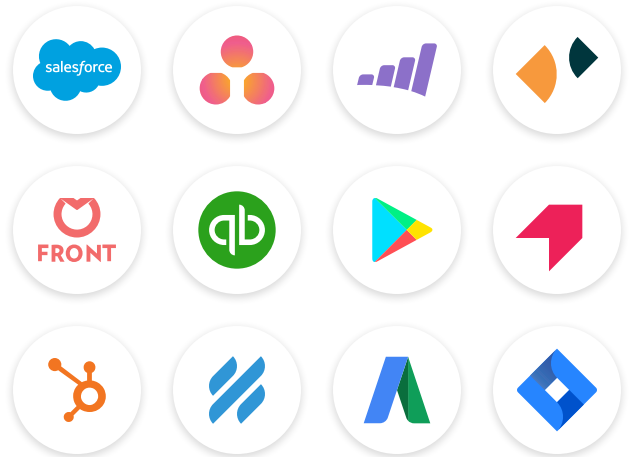

“With just a couple of clicks, you can start syncing large amounts of data from your source systems into Snowflake’s high-performing, virtual data warehouse.”

– Bryan Christ, Director of Data Analytics, Access Financial

Fivetran frees your data team to focus on strategic insights and growth, not pipeline engineering.

“Snowflake and Fivetran are a perfect combination of ease of use, performance and minimal maintenance. With Snowflake’s instantly scalable compute and Fivetran’s seamless pipeline service, we can analyze data instantly and generate business outcomes in a fraction of the time.”

– BRYAN CHRIST, DIRECTOR OF DATA ANALYTICS, ACCESS FINANCIALS

The Data Warehouse Built for the Cloud

Hundreds of Fivetran customers centralize their critical business data in Snowflake Data Warehouse — and demand is growing rapidly. As a fully relational ANSI SQL database, Snowflake allows organizations to harness their current tools and skill sets. It also leverages a unique, cloud-optimized architecture and features like vectorized execution and adaptive optimization to deliver industry-leading performance, simplicity, concurrency and affordability.

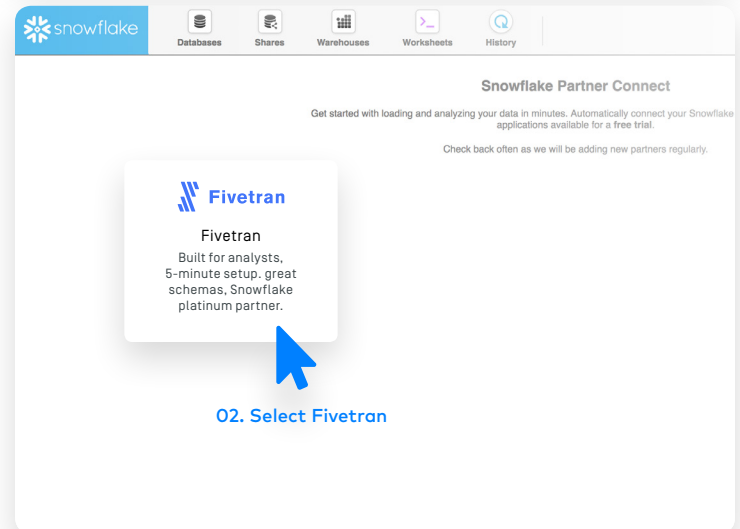

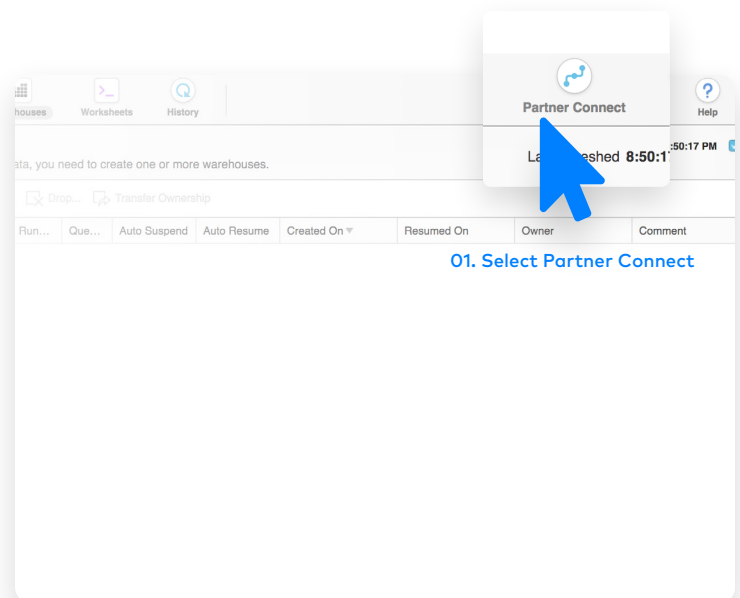

Snowflake Partner Connect

Effortless Data Loading and Analysis

Snowflake Partner Connect for Fivetran is the fastest, simplest way to deploy a data pipeline for advanced analytics. Just click the Partner Connect tab in Snowflake’s web interface, find Fivetran and use the Connect button to create a free Fivetran trial account — that’s it. Centralizing your business data for comprehensive insights doesn’t get any easier.
