

# Data Pipelines, Reinvented.

Complete replication. Zero coding or maintenance. Standardized schemas.

**Fully automated connectors**  
Our pre-built, fully automated connectors deploy in five minutes and replicate all your applications, databases, events and files into the cloud warehouse of your choice.

Ready-to-query schemas enable instant analysis and ensure you get all the data you need, with no duplicates. And Fivetran owns all maintenance.

Incremental batch updates and automatic schema migrations minimize disruptions, and you can always add new data sources — no coding or maintenance required.

**talkdesk**

“Fivetran has been a massive accelerant to getting data insights.”

– Ernest Wong, Product Manager, Talkdesk

## Next-Level Enterprise Security

- HIPAA, SOC 2 and GDPR compliance
- End-to-end encryption
- Built-in version control, testing and infrastructure management
- Zero data retention

## Built to Scale

- Instantly scalable cloud resources
- Low-impact replication to protect source systems
- Highly optimized loading
- Volume-neutral pricing to facilitate scaling

Fivetran customers leverage the power of centralized data — with no engineering burden.

tableau.com

Fivetran replicates all your data into your warehouse and continuously updates it, while the Tableau analytics platform enables you to configure it within the visualization layer. Tableau dashboards empower everyone in your organization to see and understand data, so every business decision-maker can leverage business intelligence insights.

## Four Steps to Superior BI

1. Set up your data warehouse. Fivetran supports all major cloud warehouses, including BigQuery, Snowflake, Redshift and Azure. If you don't have one, we can set up and manage BigQuery for you.
2. Use Fivetran to connect data sources to your warehouse. With just a few clicks, you can aggregate all your application, database, file and event data.
3. Connect Tableau to your warehouse.
4. Build visualizations and generate insights. With all your data at your fingertips, leverage Tableau to build any visualization dashboard you need.
